BRIEF DESCRIPTION OF THE DRAWINGS

Page 19, lines 11-14, please replace with the following amended paragraph as follows:

~~Fig. 1.~~ Figs. 1A and 1B are ~~Optical~~ optical coherence images of the fovea (4mm horizontal scan) of a) patient in remission after all immunosuppressive treatment has been withdrawn and b) patient in relapse. The retina is markedly thickened and shows black cystic spaces consistent with cytoid macular oedema.

Page 19, lines 16-19, please replace with the following amended paragraph as follows:

~~Fig. 2.~~ Figs. 2A and 2B are T cell proliferative responses stimulated with p336-351 or 136-151 (A) and HSP65 (B) before (0) and after tolerance was completed (3 months) and at the end of observation (9+ months) in 5 patients in whom uveitis was prevented and 3 patients with relapsing uveitis.

Page 19, lines 25-26, please replace with the following amended paragraph as follows:

~~Fig. 4.~~ The Figs. 4A and 4B show the effect of stimulating PBMC with p336-351 on the production of IFN- γ and TNF- α , evaluated by cytometric bead analysis.

At page 20, please insert the attached paper copy of the sequence listing and renumber the claims pages accordingly.
